

Geoinformatics and UAVs in natural disasters.

SenseLAB Research
Laboratory of Geodesy and Geoinformatics
Technical University of Crete

Asst. Professor Panagiotis Partsinevelos
ppartsi@mred.tuc.gr

SenseLAB Research

Senselab Research

- Spatial information systems, GIS,
- Remote Sensing, Earth Observation,
- Unmanned Aerial Systems,
- Tangible GIS, Smart Cities, Crowdsourcing,
- Gestural interfaces,

Technical University of Crete

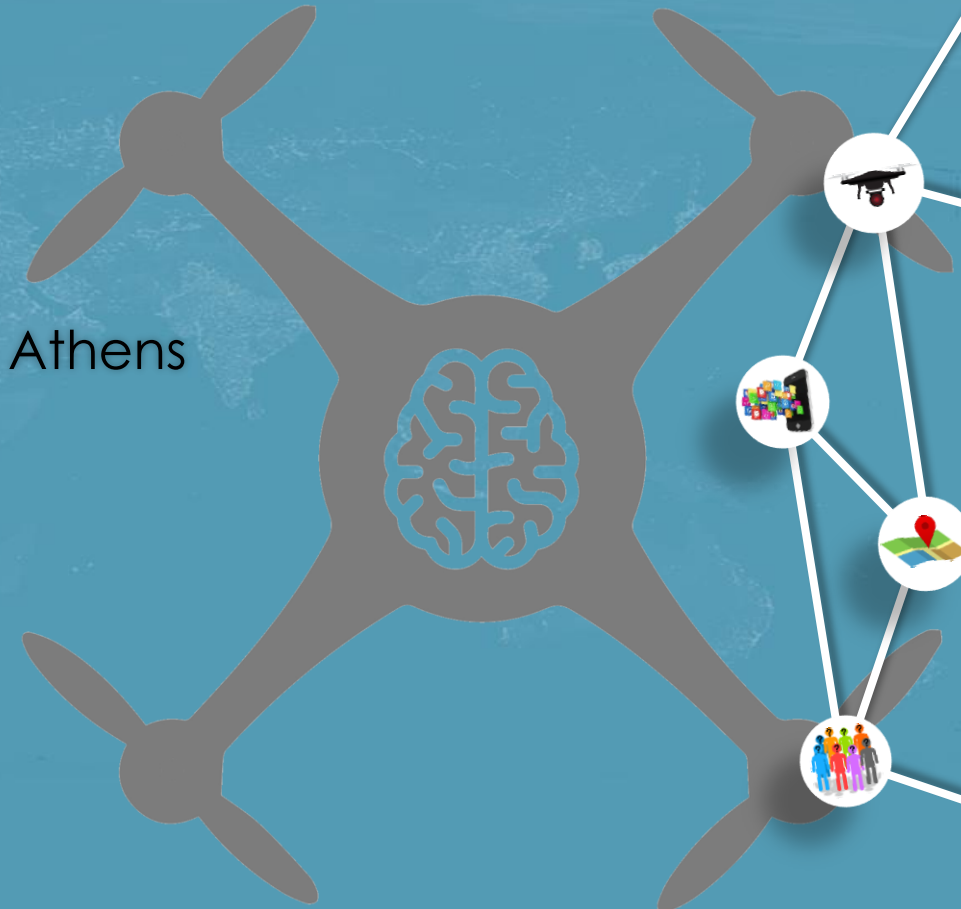

SenseLab: Spatial Informatics Group

Asst. Professor Panagiotis Partsinevelos

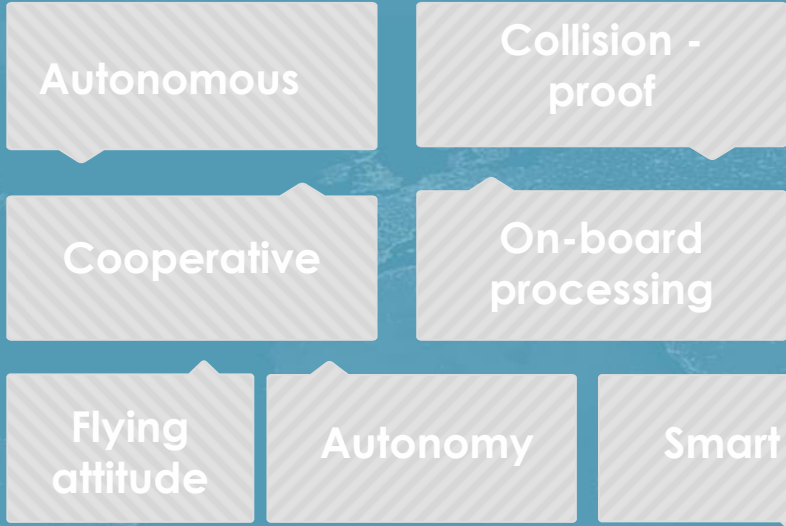

- PhD, University of Maine, USA
- NASA center of Excellence in Remote Sensing
- National Center of GIS of USA
- Dipl. Surveying Eng., National Technical University of Athens
- Post-Doc, Institute of Computer Technology, Patra
- Fellow, GFZ, Berlin, Germany

Multidisciplinary team:

- Electronics Engineering/Computer Science
- Mineral resources Engineering
- Mechanical Engineering

UAVs: design, construction, hardware programming, applications

Mapping: 3D, thermal, multi-spectral

Re-Research in UAS

- Simple visualization,
- Combination of commercial hardware,
- 3D modelling,
- Sensor integration and mapping,
- Reinventing the wheel in Greece and EU

Vicious circle of Legislation

- Privacy & security are threatened,
- thus legislation becomes unreasonably strict and horizontal,
- meaning that research is obstructed,
- and a few entities will survive that can politically influence legislation.

Vicious circle of funding

- Most researchers are just users (UAVs, GIS),
- Attract multi-million funding on redoing things,
- Have become reviewers of proposals & papers,
- Obstruct funding on innovation and horizontal, basic research,
- They promote mimicking, science becomes flat...
- Review paper on UAVs and slope monitoring...

Vicious circle of ignorance

- 15 years ago on data integration and remote sensing,
- 8 years ago on forest fires & natural disasters,
- 7 years ago on energy and mining,
- 5 years ago on precision agriculture,
- on defense, surveillance, environment, etc.
 - What were their questions?

Real time animated maps

Modular sensor integration

e.g. Provides best routes through smoke,
Becomes your eyes.

○ Thermal mapping for fire disaster evacuation.

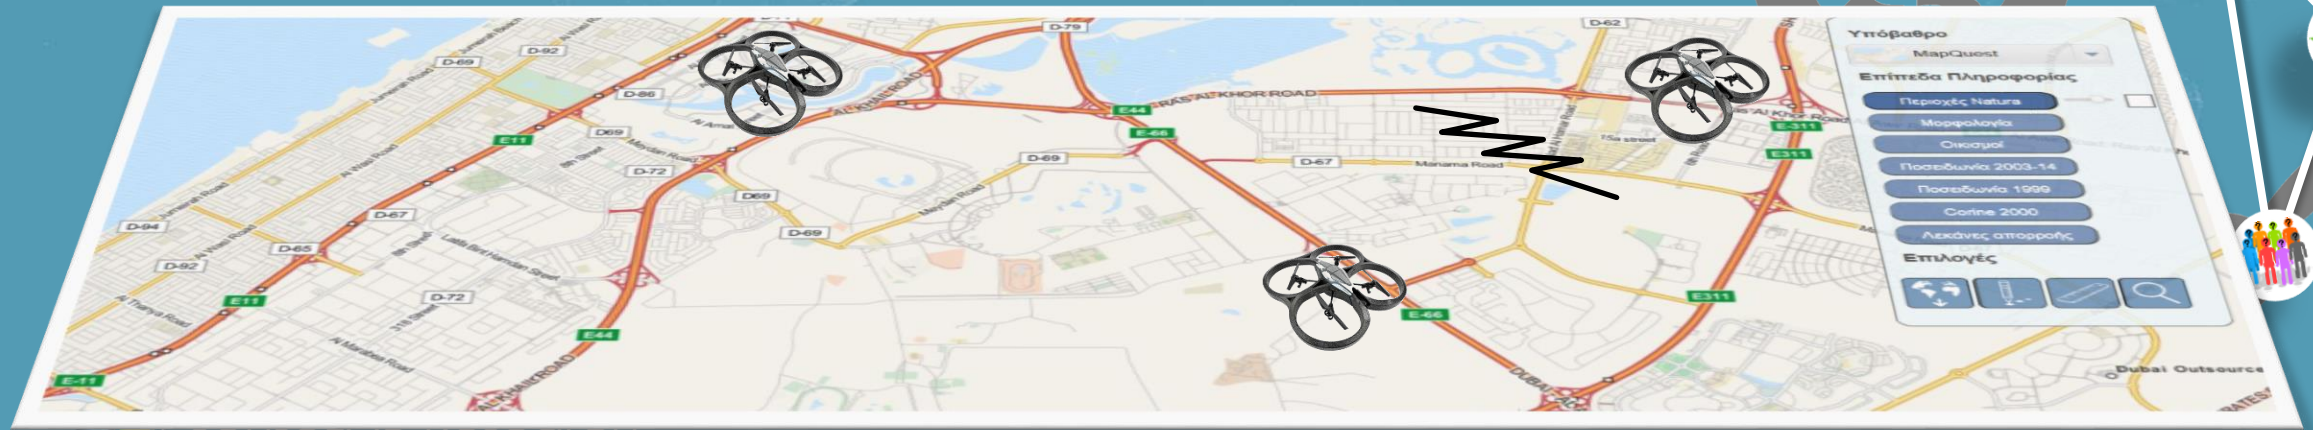

SenseLAB Research

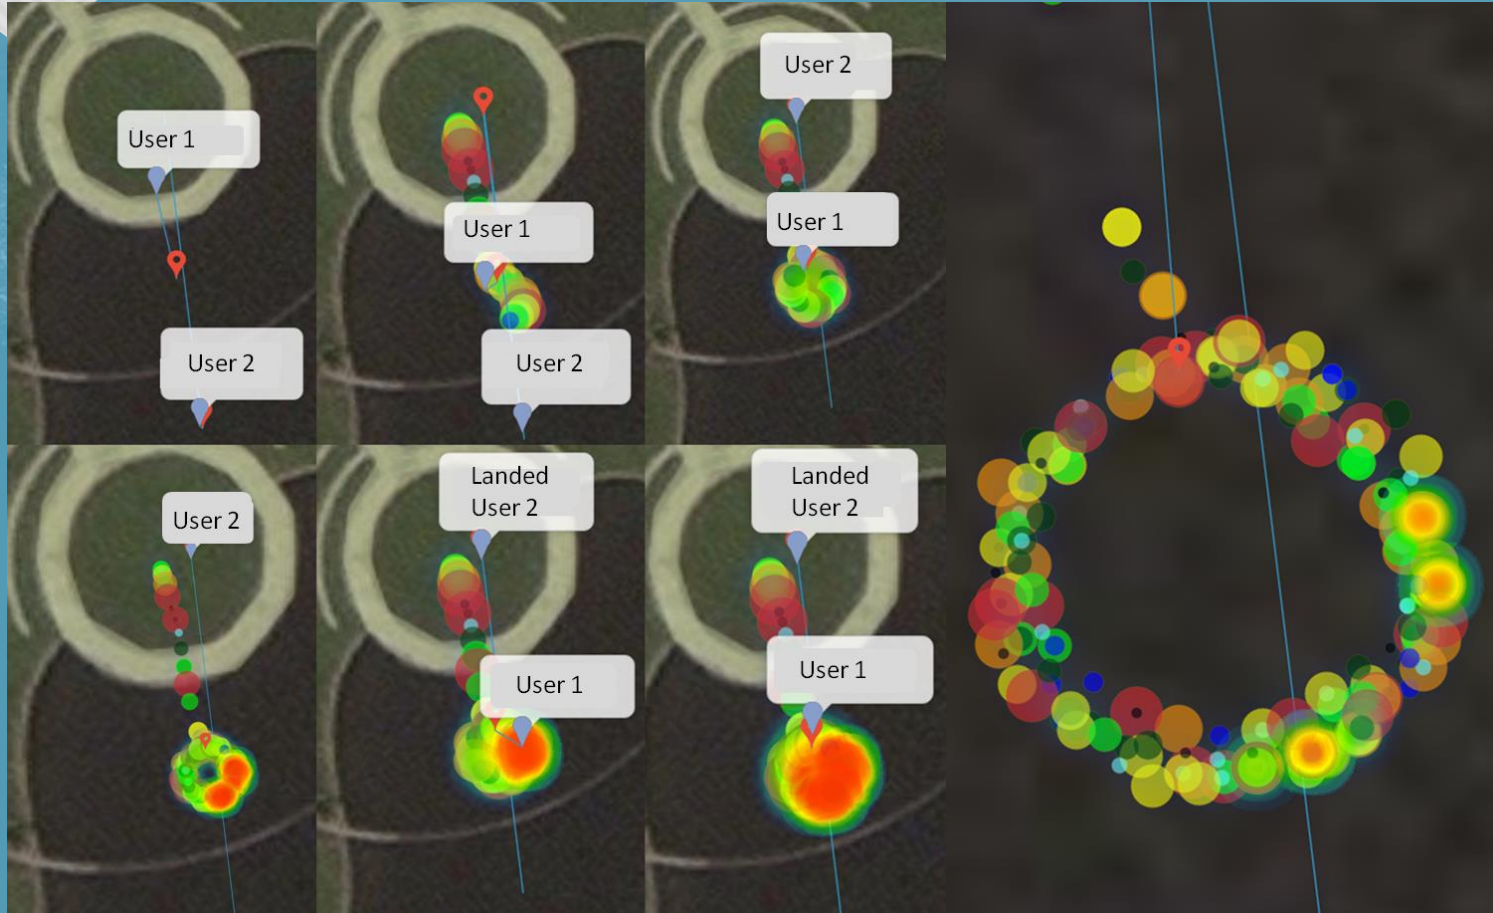

Fleet management

Cooperative scenarios
Collision avoidance

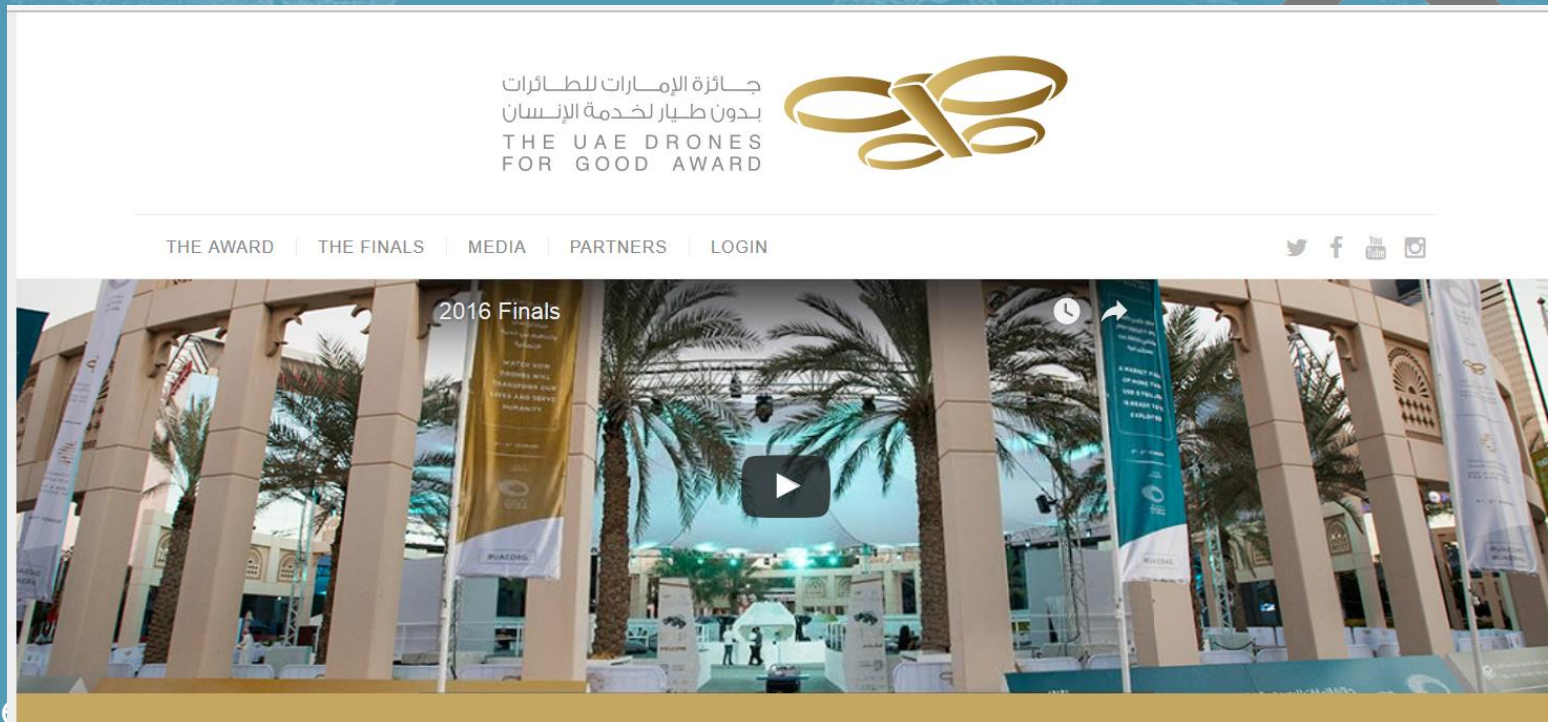

Real time mapping - coordination

Drones for Good

- SenseLAB 1st in EU, 3rd in the world,
- 1017 teams from 165 countries
- Harvard, MIT, Oxford, London Business School, RMIT, University of Toronto, Seoul National University.

S

Smart-drone

- Personal SAR drone
- Carrying medicine
- Communicate if no network
- Surveying

Functionality

Find Help

- Fly to **find mobile services**,
- Provide your location/message/status to authorities.

Bring Medicine

- Fly to pharmacies in the area with request,
- **Carry-deliver** back your medicine.

Record & Report

- **Throw**, fly and **record** situation,
- Navigate to e.g. Police & report.

Where am I?

- Fly above & scan area, **decide** escape route
- Return & provide **map-images** of area.

Drones for Good

1017 Teams, 165 countries

Harvard, MIT, Oxford, London Business School, RMIT, University of Toronto, Seoul National University.

Head camera control

IoD concept

○ Internet of Drones

Satellite Remote Sensing

- Sensor type: electro-optic, SAR,
- Spatial resolution: km to cm,
- Spectral sensitivity: visible, IR, Thermal, Microwave,
- Temporal periodicity: 20 days, continuous, ordered,
- Radiometry: grayscale levels.

EU EO Programme

- SENTINEL 1
 - SAR, land and ocean

- SENTINEL 2
 - Optical for land monitoring

- SENTINEL 3
 - Altimetric + more, sea topography, marine, SST, LST, etc

- SENTINEL 4, 5, 5P
 - Air quality monitoring in high resolution, UV, climate change

SenseLAB Research

- urban area management,
- sustainable development & nature protection,
- regional and local planning,
- agriculture, forestry and fisheries,
- health,
- emergency management,
- infrastructure, transport and mobility,
- tourism,
- renewable energies

Galileo Mission

- global navigation satellite system,
- global positioning service under civilian control,
- interoperable with GPS and Glonass,
- deliver real-time positioning 1 m. accuracy
- 24 operational satellites at 23000 km

- CybEARTH: Augmented visualization
- MiaB: spatiotemporal chat

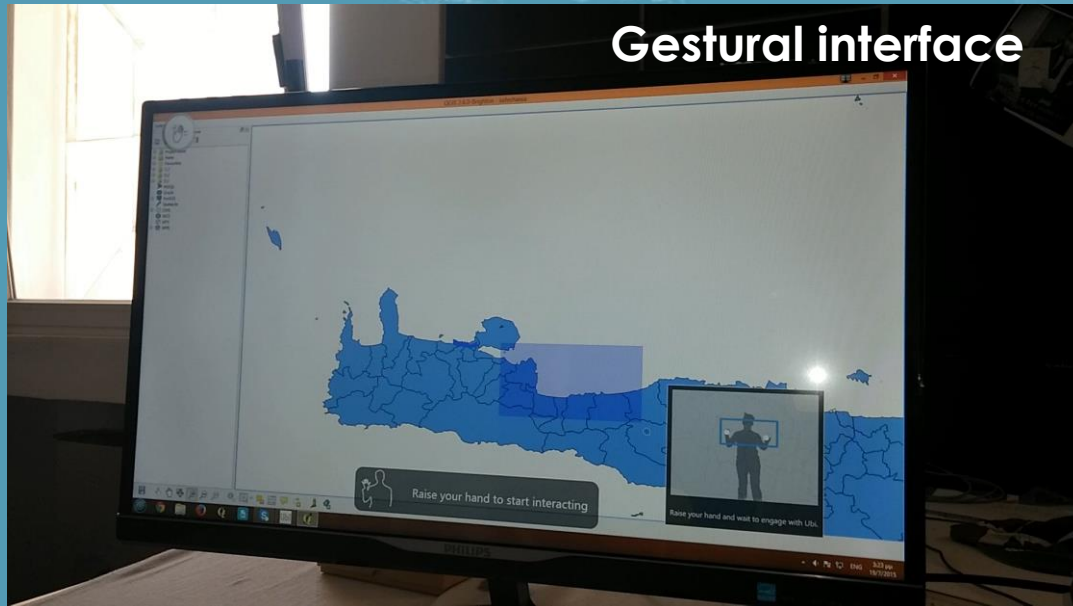

New Zealand earthquake - Crete

3D Interaction

- Real time scenario monitoring

Selected Awards

Berlin, Madrid, Dubai, Hague, Brussels, ...

- 2016, **ESNC**, 2nd Overall winners (400 teams),
- 2016, **GSA**, European GNSS Agency, 1st place,
- 2016, **Satellite Masters**, University Challenge, 1st place,
- 2016, **DJI – Ford** challenge,
- 2016, **Drones for Good**, 1st place in Europe, 3rd Globally, (1000 teams-165 countries),
- 2016 Winner, MyGEOSS, **Joint Research Center EU**,
- 2016, Health Business Awards, Gold Medal,
- 2015, 1st Winner, **Copernicus Masters** & NCMA Spatio-temporal data visualization Challenge,
- 2015, **European Space Agency** Earth Monitoring Finalists.
